

FULLY AUTOMATIC & SEMI AUTOMATIC

Linear Filling Machine

25 Years of

COMPLETE LINE SOLUTIONS

+1000 RINSING - FILLING - CAPPING LINES WORLDWIDE

Linear Filling Machine

SEPPA is one of the members of the Canadian Crystalline Group of Companies. SEPPA has incorporated the state of art technology in design engineering of the systems being manufactured. Evats-1000 fully automatic filling and capping is specially designed. The entire process has provisions in the machine for filling, capping and sealing will be controlled by a PLC with Sensor Controls with instrumentation system. The whole equipment is sleek and is capable of bottling various sizes of bottles ranging from 200 ml to 2 ltrs. The pet/oil bottles are fed into the Input Feed Conveyor of the Evats-1000. The bottles go automatically on the conveyor to the filling station. Optic sensor senses the bottles and allows only required amount of bottles to enter the filling station. Special pneumatic bottle clamps to hold the bottles by the neck and body prior to the filling heads descending into the bottles. The filling is very accurate and is done by specially designed SS304 gravity filling valve, filling system is incorporated for gravity filling. The filled bottles then go to a cap chute system where they pickup caps before being capped in the capping station. A special vibratory cap feeder provides proper orientation to the caps. The capped bottles are then sent out to the discharge conveyor.

Optional Features : Shrink Labeller is provided on the output conveyor

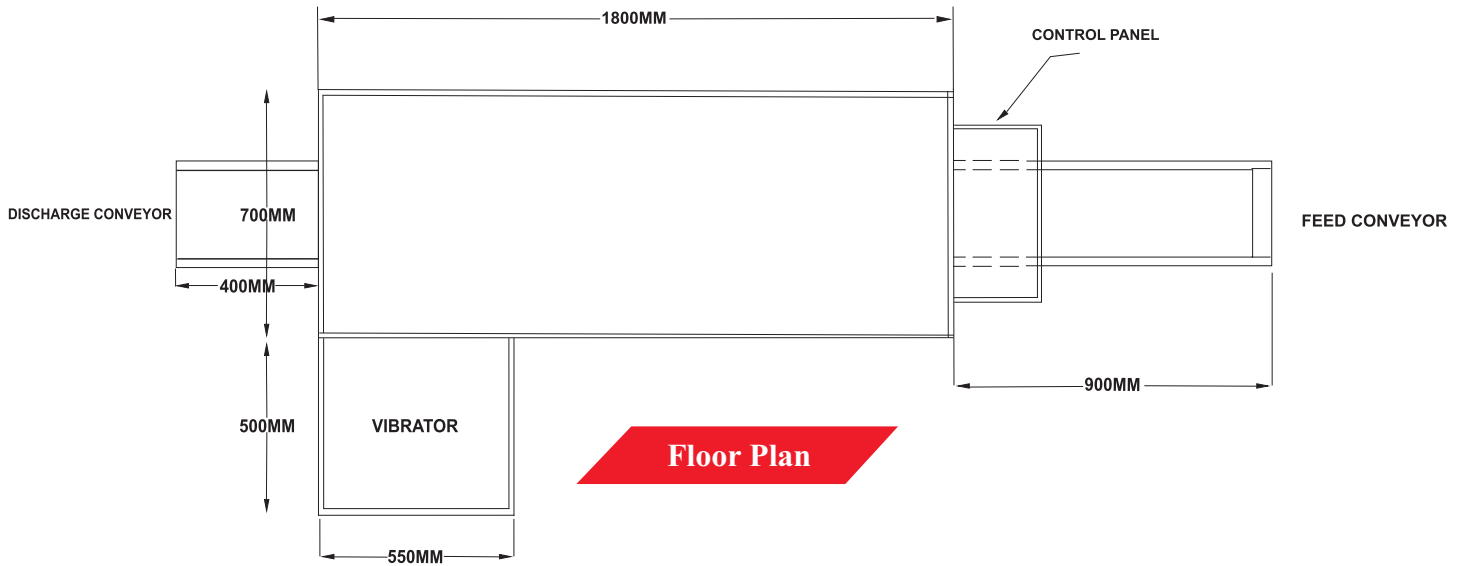

Model : Evats1000
Speed : 6-10 BPM
MOC : MS & SS 304 (Contact Parts)

Model : Evats1000
Speed : 6-10 BPM
MOC : SS 304

EVATS 1000-Linear Bottling Machine
